### **DETAILED ACTION**

This Office Action is in response to amendments/arguments filed 11/22/2011.

Claims 1 and 3-18 are pending in the instant application.

#### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/22/2011 has been entered.

#### ***Response to Arguments***

Applicant's arguments filed 11/22/2011 have been fully considered but they are not persuasive. Applicant argues one would not connect the *Nijenbanning* Bowden cable with the control system of the Woo mechanism absent hindsight. However, *Nijenbanning* and *Woo* both teach controllers for locking devices, which makes them analogous pieces of art. Therefore, it is not hindsight for the *Nijenbanning* controller to be modified with the features taught by *Woo* that are advantageous to locking device controllers.

Applicant argues the controller taught by *Nijenbanning* is not electromechanical, but mechanical because *Nijenbanning* teaches the displacement mechanism of the

Art Unit: 3772

locking device may be operated by the user's hand (col. 6, lines 33-35). However, when *Nijenbanning* teaches the locking device may be operated by hand, *Nijenbanning* is describing operating the controller by hand. The user maneuvers the controller (20) by hand, and the signals from the controller (20) are delivered to the locking device via the cable (21). Therefore the controller (20) must be electromechanical in order to function.

Applicant's argument that *Woo* fails to teach the signaling of the automatic detection of the locking state is persuasive. Therefore, the rejection is withdrawn. However, Applicant failed to disclose this feature in Applicant's original disclosure, therefore, it is new matter.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 and 16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant's Specification fails to disclose the signaling arrangement emits a signal, responsive to the means for automatically detecting the locking state.

***Allowable Subject Matter***

Claims 3-15 and 17-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
